

*“In nature there are neither rewards nor punishments; there are consequences.”*

Robert Green Ingersoll

## PURPOSE of PANHANDLE SEEP

- 🌐 Increase skill and knowledge levels in the stormwater and erosion fields
- 🌐 Protect resources—people, water & economic
- 🌐 Foster communication and collaboration among industry, agencies and landowners
- 🌐 Develop a local pool of experts to serve as resources to the development community

## WHO SHOULD ATTEND?

**Contractors, Excavators, Developers, Design Professionals, Public Works Staff, Planners, and individuals involved in growth and/or water quality issues.**

***Those who attend will:***

- 🌐 Develop new skills in erosion and sediment control on construction sites
- 🌐 Reduce costs through proper selection and installation of erosion control practices
- 🌐 Learn how to protect natural resources during development
- 🌐 Be able to troubleshoot problems on their construction site
- 🌐 Learn side-by-side with agency representatives and contractors for a consistent approach & more effective communication

—Increase skills and marketability to clients while reducing impacts—

Panhandle SEEP

# Basic SEEP Class

## Construction Site Erosion-Sediment Control Training

Sponsored by: Panhandle Stormwater  
and Erosion Education Program (SEEP)  
Steering Committee

Stormwater and erosion of soils can complicate life for everyone. If left unmanaged, they threaten water quality, health and safety of the public and the economy. Pollutants carried by eroded soil and water can contaminate drinking and surface water sources, destroy fish habitat, make recreational surface waters undesirable, and in large amounts, can destroy homes and endanger lives.

The Panhandle SEEP is an educational program committed to training individuals—including construction and development industries and agency personnel—in the fundamentals of erosion and sediment control planning and practices.

## CERTIFICATION

Panhandle SEEP Certification confirms that the participant has completed the full training and passed an exam. Everyone is welcome to attend the training (no pre-requisites required); testing and certification are optional.

## SEEP BASIC COURSE

### DAY ONE

**8:00 am – 5:00 pm**

Nature of Erosion and the Water Cycle  
**Changes caused by development**  
 Stormwater Erosion Regulatory Requirements  
**Local, State & Federal Sediment & Erosion Control Regulations**

Site Assessment & Planning  
**Analysis of site characteristics**  
 Best Management Practices  
**Installation, Inspection & Maintenance**

### DAY TWO

**Field Session 8:00 am – 12:00 pm**  
**Exam for Certification – 1:30 pm**

The field class will instruct participants to properly construct and install Best Management Practices for erosion and sediment control. Demonstrations will include proper installation of:

- Wattles
- Hydromulching
- Silt Fences
- Rolled Erosion Control products
- and more

## REGISTRATION

Your confirmation of registration/payment, including classroom and field site address and directions, will be mailed to you.

A Basic Seep Manual will be provided at the classroom session.

## COST

**Fee & Cancellation Policy**  
**Class fee: \$200**

**Register early as class size is limited.** One week cancellation notice required for full refund. No-shows are responsible for the full registration fee. Substitutions are always welcome.

**Mail Registration with \$200 Payment to:**  
 Panhandle Area Council (PAC)  
 11100 N Airport Drive, Hayden, ID 83835

## SCHEDULE

Basic SEEP classes are scheduled throughout the Panhandle of Idaho every Spring. However, the SEEP Committee can accommodate special requests if class size is adequate. Check our website for announcements of upcoming classes:

<http://www.plrcd.org/SEEP/>

Sessions are scheduled as a unit, each unit including a classroom and field class day. Some accommodations may be possible; please contact Tricia Lotton at (208) 772-0584 Ext 3013 for information.

## COMING SOON: ADVANCED SEEP COURSE

The SEEP committee is currently developing an advanced SEEP course, which will guide participants through the steps of developing and implementing a **Stormwater Pollution Prevention Plan (SWPPP)**. Successful completion of the Basic SEEP course will be required for enrollment. Stay tuned for more information!
